To:

STIC-Biotech/ChemLib Subject: 09/732,081

Importance:

Please search SEQ ID NO 3 and 4 with respect to polypeptides/proteins. The nucleic acid should be back translated to the polypeptide. Thanks.

Ginny Bortner Remsen Building Art Unit 1645 Room E03, B02 (571) 272-0862

```
disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. PQE/HP30 protein
                                                                                                                                                                                                                                                                                                                                                                   121 LEEMDDEEVKEMCDELSIKNTDNLNRQALSAATLTLFKMGGFKSYQLAVIVANAVAKTIL 180

AAE26878;

RESULT 2 AAE26878 Helicobacter pylori nucleic acid sequences and related polypeptide(s) useful for vaccines to treat or prevent H. pylori infection, and to detect Helicobacter.

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a

The present sequence is a H. pylori cytoplasmic protein. The protein may identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 mucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest;
                                                                                                                                                                                                                                                                                                                                    particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

Helicobacter pylori nucleic acid sequences and related proteins - used for diagnostics and therapeutics.

Claim 18; Page 184; 235pp; English

This sequence represents an H. pylori cytoplasmic protein. Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for generating vaccines for immunising subjects against H. pylori or for use in detecting the presence of Helicobacter species in a sample. Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of 2000 bp. Purified DNA creaments were blunt-ended and ligated to unique BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary. Therefore the linkers will not concatemerise nor will the cut vector re-ligate to pwritied DNA samples were then sequenced. Note: The ORF/protein reference number for this sequence was obtained from the related specification, WO9640893

The present sequence is a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for by computer evaluation. To identify likely H. pylori antigens for vaccine by computer, the amino acid sequences predicted room various ORF were analysed for significant homology to other known or exported membrane analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in B. coli hosts

Helicobacter pylori nucleic acid sequences and related polypeptide(s) useful for vaccines to treat or prevent H. pylori infection, and to detect Helicobacter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ਨੋ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            O'G4721

Dypotherical protein b0011 - Escherichia coli (strain K-12)

C'Species: Escherichia coli

C'Species: Escherichia coli

C'Species: Escherichia coli

C'Species: 12-68p-1997 #sequence revision 17-Sep-1997 #text_change 01-Mar-2002

C'SAccession: C64721; D56689; S28462

-!- COPACTOR: Pyridoxal phosphate (By similarity).
-!- PATHWAY: Biotin biosynthesis; first step.
-!- PATHWAY: Biotin biosynthesis; first step.
-!- SIMILARITY: Belongs to class-II of pyridoxal-phosphate-dependent aminotransferases.
